

RxBLU™ Version 2.1.5 Enhancements

Patient Education Printing – Patient education monographs for new prescriptions can now be automatically printed. If the prescription is a non-electronic billing type, the monograph is printed along with the label. If adjudicating a paid claim, the monograph will print along with the label. If you wish to have this feature turned on, please contact a Cypress team member.

PHI on Patient Education Monographs – By option, the patient information can be omitted from the top of the report to eliminate PHI (Privacy Health Information). If you wish to have this feature turned on, please contact a Cypress team member.

Preferred Wholesaler – Cypress has begun to offer multiple wholesaler tracking, reporting and EDI. A new field has been added to the drug product information window allowing you to identify the preferred wholesaler warehouse. Please watch for additional future enhanced features to help in identifying best ordering practices (BOP).

Negative Acquisition Prices – In the event a negative acquisition price is found for a drug, a popup alert message will appear.

RxBLU™ Version 2.1.5 Enhancements

Enhanced PMP Data Validation – Before the completion of a controlled substance prescription, the program will check for a valid prescriber DEA number.

Setting The Delivery Date – For those using the delivery option from the profile, when you mark the Rx as delivered, the prescription's picked up date is now set to the date it was delivered.

Label Enhancements:

VOID - Enlarged / more pronounced VOID indicators have been added to the hard copy and receipt.

Patient Cell Phone Number - Has been added to the receipt label for additional contact options.

A screenshot of a prescription label and receipt. The label is for Rx 121114, Gabapentin 100mg Capsule, prescribed by Ronald Collins. It includes patient information (WADA JANE), prescriber information (WADA JANE), and a total cost of \$0.11. A large "VOID" stamp is visible on the label. The receipt section shows the same information and includes a barcode and a "Thanks a whole lot for coming in." message. The label also features a "Customer Service Is Our Business" logo and a phone number (1-800-922-9142).

Prior Authorization – You can now remove any entry in the “Prior Auth” queue. Simply select the Prior Auth queue at the bottom, then right-click on the desired prescription then select “Clear Prior Authorization”.

Patient Notes Security –The program will now not allow you to change or alter or delete notes from a previous day. A new note will be required referencing a prior note. Expanded notes can be found by using the F3 patient access key, then pressing the “Notes” button.

RxBLU™ Version 2.1.5 Enhancements

Refilling Future Dated Prescriptions – The program will prevent you from refilling a prescription if there is a refill that is set in the future. This rule also applied if refilling from the “Refill Too Soon” bucket list.

Printing eScripts to a PDF – There is a new option to print an eScript from the queue to a PDF File. Simply right-clicking on the desired eScript and select “Create PDF” will print to PDF. A properly installed windows PDF print driver must be defined on the computer. Additional CLOUD Configuration is required before use.

Revised Drug Imprint Formatting – It was brought to our attention that the product imprint description was found to be misconstrued at times depending on the drug imprint. These changes are now visible both on the labels and on display in the minimized drug information window.

Before: *white, round-shaped, scored side 1:C, side 2:5/325*

Now: *white, round-shaped, scored, (side1) C, (side2) 5/325*

Report Enhancements:

Patient Profile – When selecting the patient, the patient’s date of birth is shown to increase selection accuracy.

Prescription Listings – An option is now available to include all associated prescriptions where the product is generically equivalent. On the main report option window, select “Generic Equ” to expand the report.

Unpaid Claims Report – This report now includes both the Usual and Customary price and the acquisition price to identify the possible loss of revenue with the unpaid claim.
